WANTED

Name of pest ____________________________________________

PICTURE OF PEST

Scientific name: _________________________________________

Address (natural habitat): _________________________________

Reason(s) it is a pest: ____________________________________

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________
Describe how this insect pest is controlled.

Is this method the safest way to control it?

Could you devise a better IPM method, either biological, mechanical, or cultural, to eliminate the problem?
